This is a 4 SH required course that includes the undergraduate Capstone for students in the PharmD program. The course contains a notable public health and policy scholarship component that requires students to adopt a population-level perspective to: (1) describe the principles of economic evaluation; and (2) apply economic evaluation principles to critically assess pharmaceuticals, technologies, and services related to pharmacy practice. Population-level critical thinking is challenging for student clinicians focused on learning about direct patient care delivery. The capstone project, completed by 5-6 member groups, requires students to use existing published literature to conduct a novel clinical and economic appraisal of an intervention. During 2011, 2012, and 2013 I was the only faculty member responsible for the course and had a total of 407 5th-year PharmD students comprising 67 groups complete the group project. Each year, many students prepare abstracts for poster presentation at the American Society of Health System Pharmacists (ASHP) Midyear Clinical Meeting. A total of 52 groups (79%) have submitted abstracts during these three years and, of these, 49 (94%) have had abstracts accepted through the main professional poster mechanism (not the student mechanism) at ASHP. The students were awarded \$9,690 through the Provost's Undergraduate Research Program grant for conference registrations during 2012 and 2013. In addition, one of the cost-effectiveness projects was one of five finalists in the student poster competition (80+ submissions) at the American College of Clinical Pharmacy (ACCP) Annual Meeting in October 2012. Several projects have been published in peer-reviewed journals.
