## Part II: Research, Teaching, and Clinical Contributions

### A. Research, Teaching, and Clinical Contributions.

*(Narrative report (500 words or less) of the areas in which most of your time and effort is spent).*

#### OVERVIEW

I am the Executive Director of Rehabilitation Services at Brigham & Women's Hospital and Brigham & Women's Faulkner Hospital. I specialize in disorders of the shoulder and upper extremity.

#### RESEARCH

My clinical research interests include:

- Tissue quality related issues and their impact on Rotator Cuff Repair and functional outcomes.
- The role of underlying etiology and its impact on functional outcomes in patients who have undergone Total Shoulder Arthroplasty.
- The potential positive outcomes for patients being managed conservatively after diagnosed with Vascular Thoracic Outlet Syndrome.
- The role of joint specific functional outcome measures in clinical rehabilitation practice.
- The impact of Picture Archiving and Communication System (PACS) on Physical Therapy clinical decision-making.
- The role of Eccentric Loading in the Management of Rotator Cuff Tendinosis.
- Embolization Treatment of Chronic Refractory Shoulder Tendinopathy.

## **E. Report of Clinical Activities**

### **1. Description of clinical practice:** *(field, areas of major focus, site(s) of practice [private office, HMO, teaching hospital etc.])*

My clinical practice is focused on the physical therapy assessment and treatment of problems of the shoulder, elbow, hip, knee, and foot/ankle.

### **2. Patient load:** *(indicate complexity of cases, as appropriate)*

My typical week includes about 8 hours of clinical work. The rest of my week is devoted to administrative activities.

The level of complexity of patients seen varies but frequently our patients present with complex disorders, due to the tertiary nature of our hospital's practice.

Due the large volume of administrative work that I am currently doing, I am evaluating and treating approximately 10 new patients per month. My primary clinical area of concentration is the evaluation and treatment of shoulder and knee related disorders.

### **3. Clinical contributions.** *(e.g., introduction of new methods of clinical diagnosis, prevention, treatment, care delivery)*

My clinical interests include tissue quality related issues and their impact on Rotator Cuff Repair and functional outcomes, the role of underlying etiology and its impact on functional outcomes in patients who have undergone Total Shoulder Arthroplasty, and the potential positive outcomes for patients being managed conservatively after diagnosed with Vascular Thoracic Outlet Syndrome.
